

# TOUCHSCREEN DIGITAL WHITEBOARDS

Are you ready for Digital Transformation? Touch-Enabled Digital Whiteboards can save Care Teams as much as 5 minutes per patient, per round, per day.

We replace the typical dry erase board in a patient's room and offer a touch-enabled, digital solution to display the same information, integrated with existing hospital systems, the EHR and Nurse Call in real time.

## FROM MANUAL TO DIGITAL FOR BETTER CARE

Forget sliders, flags and magnets. No more markers, erasers and perpetual supply ordering. MediaCare, HCI's enterprise integration platform aggregates, displays and automatically updates critical, customized patient information from existing systems via HCI interactive whiteboards and tablets:

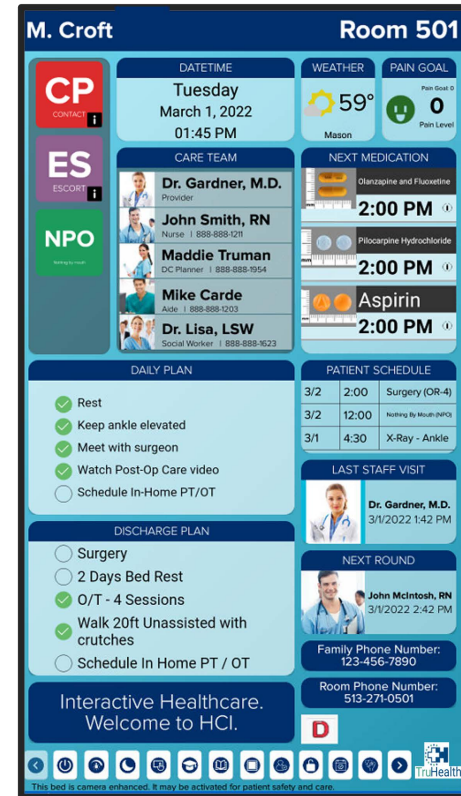

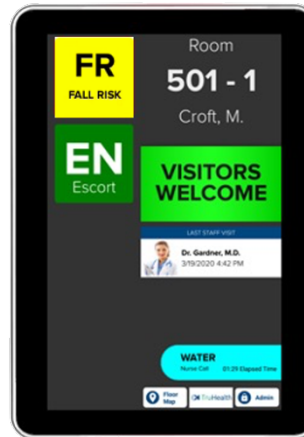

- o EHR
- o Nurse Call Systems
- o Real-Time Location Systems
- o PACS (Picture Archiving and Communication)
- o Smart Bed Systems
- o GoJo / Hygiene Systems
- o LDAP, Active Directory and ADT systems
- o BMS, EVS and other systems
- o Risk Alerts and Staff Safety Alerts
- o Room and Visitor Status

## CARE TEAM AND WORKFLOW OPTIMIZATION

HCI Interactive Whiteboards allow the care team to view patient information before and after walking through the door, and from the Nurses' Station.

- o Next and Last Round information with Care Team photo and ID.
- o View Lab and Consult Status and view results using the touchscreen.
- o Use bi-directional audio and video for observational monitoring and Nurse Call response.
- o Every action entered on the Interactive Whiteboards simultaneously displays on other connected devices.
- o Caregivers can order needed patient room equipment on-demand, direct from the patient's room.
- o Cleanable without loss of patient data.
