

Convergint value

Drones pose a significant threat to U.S. **correctional facilities** by enabling criminals to circumvent screening processes and deliver contraband over prison walls. Currently, state and local corrections departments are not legally authorized to interfere with drone flight, so the best mitigation option is to swiftly and **consistently locate** the drone pilot.

Convergint provides **drone detection solutions** for correctional facilities that detect, classify, locate, and track both drone and pilot simultaneously, delivering an early warning to security teams to respond quickly and effectively before critical security events occur. Leveraging existing infrastructure, Convergint integrates proactive, scalable detection solutions to **promote safety and security** within correctional facilities.

Convergint services & solutions

- ✔ Automated configurable alerts
- ✔ Comprehensive detection
- ✔ Real-time data & analytics
- ✔ Fast response times
- ✔ Seamless integration
- ✔ Scalable mobility
