Delivering professional **design and consulting services** for global customers

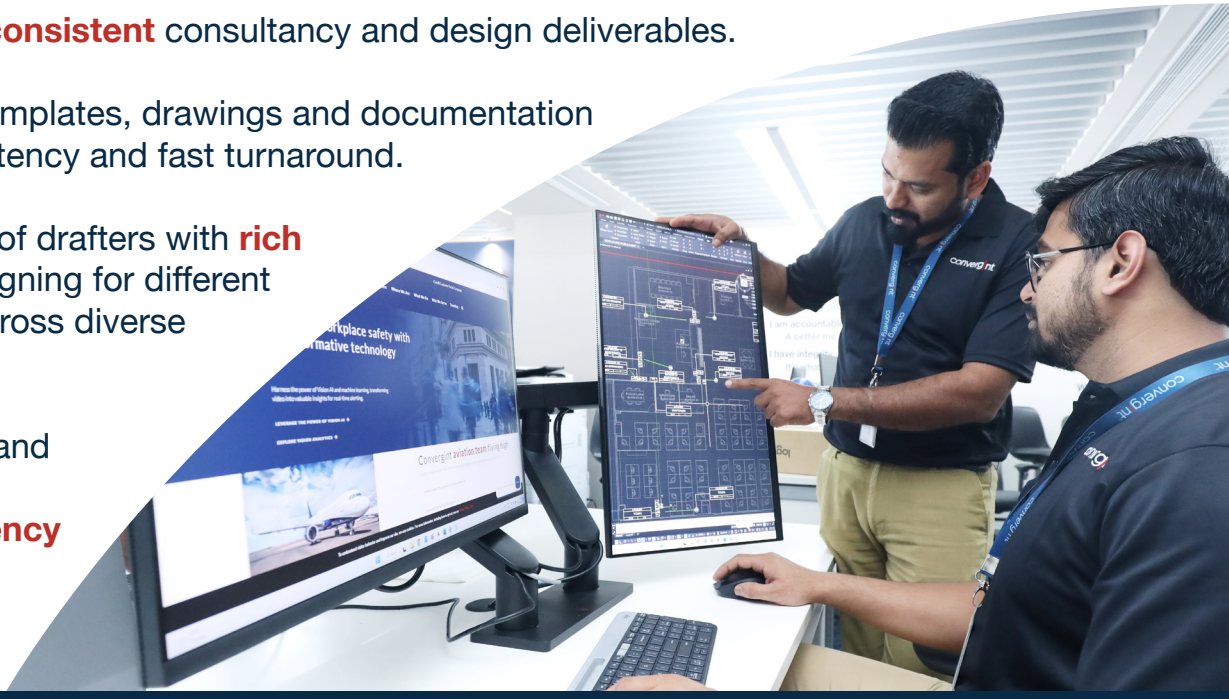
convergint®

Global Design Centre, Bengaluru

Convergint's **Global Design Centre** in India is one of multiple dedicated design centres around the world. The Bengaluru facility hosts a team of experienced, qualified design engineers and consultants that provide **centralised support** for customers with cross-regional or global requirements for high-level, standardised system diagrams and drawings.

Centralised processes and support

- **Account-based support** with a dedicated team well versed in customers' global standards.
- **Rigid OCRA process** to produce high-quality, revision-controlled design deliverables.
- High-standard, **consistent** consultancy and design deliverables.
- **Standardised** templates, drawings and documentation to ensure consistency and fast turnaround.
- Dedicated team of drafters with **rich experience** designing for different countries and across diverse systems.
- Advanced tools and technologies for increased **efficiency** and **accuracy**.



We expect to be our customers' **best service provider**

convergint®

Advanced **tools**

The Global Design Centre adopts industry-leading, advanced tools for **highly accurate** and **efficient** processes and outputs. Tools include **iDesign** (Convergint's in-house automated design software), AutoCAD, AutoDesk Revit (for 3D design) and Bluebeam Revu.

Deliverables

- **System design:** system design, assessments and operational measures; cost-effective and flexible mitigation measures design
- **Audits and assessments:** technology gap analysis; risk and vulnerability assessments and audits; conceptual planning and design, site surveys, and feasibility studies
- **Documentation review and tender management:** concepts, schematics, and design development documentation; system design peer review; technical tender management; commercial evaluation and bid award assistance
- **Security standards:** security design standards, life safety codes, and country-specific security codes and standards alignment
