

Solution focus. Critical readiness.

Support for your
organisation with expert
advice for NIS2 alignment

Convergent supports organisations in strengthening security, improving resilience, and preparing for the requirements of NIS2 with integrated solutions, expert guidance, and ongoing support.

Why NIS2 matters:

The NIS2 Directive places stronger expectations on organisations to protect critical infrastructure, manage security risks, detect incidents, and demonstrate that appropriate controls are in place.

Who is in scope?

NIS2 applies to organisations across 18 critical sectors. It covers medium-sized and large entities, with some smaller organisations also brought into scope depending on national rules.

Selected areas we support

- Access control and identity security
- Credential and access management
- Physical security integration
- Incident detection and reporting
- Operational resilience and system readiness
- Documentation, logging, and audit evidence

Where companies often need support

Becoming NIS2 ready requires better alignment between identity, physical access, operational security, monitoring, and response processes.

Common priorities include:

- Strengthening access control and credential management
- Securing critical rooms and data centres
- Connecting physical security with monitoring workflows
- Maintaining firmware, patches, and secure communications
- Improving SOC visibility and escalation processes
- Keeping reliable audit trails and documentation

Why acting now matters

NIS2 gives authorities stronger supervision and enforcement powers, including audits, compliance orders, administrative fines, and management accountability.

NIS2 readiness depends on evidence.

Organisations need to show that security controls are in place, actively managed, and ready to support incident response, audit, and reporting requirements.

How Convergent can help

Convergent supports companies by bringing together security technology, integration expertise, and operational support across the areas most closely linked to NIS2 readiness.

Identity & access security

- Access control design and integration
- Identity and credential management
- Mobile and cloud credentialing
- Advanced authentication through partner technologies
- Access reporting and governance tools

Physical security integration

- Secure access to critical rooms and data centres
- Badge and credential-based access
- Visitor and intercom integration
- Key management and controlled entry
- Physical access audit trails

Monitoring & response

- SOC and GSOC design and integration
- Centralised monitoring environments
- Real-time alerts and response workflows
- Advanced threat detection
- Integrated communications for response teams

Lifecycle support

- Firmware patch management
- Software support agreements
- Preventive maintenance
- Emergency service response
- Service documentation and reporting

Audit readiness

- Access logs and event records
- Visitor and credential records
- Maintenance and patch evidence
- Compliance-aligned advisory
- Gap analysis and improvement roadmaps

Independent by design. Customer and solution driven by choice.

Convergent is product-agnostic, selecting technologies based on what each customer requires. We recommend technologies based on your requirements, drawing on a broad ecosystem of trusted partners.

Our approach brings together solutions that fit your environment, support your operational priorities, and can evolve with your needs.

Are you ready for NIS2?

Talk to Convergent about how integrated physical security, identity, monitoring, and operational readiness can help your organisation prepare with confidence.

Your trusted partner in
protection and progress.

convergent®

Effective security and safety is a multi-layered approach involving people, processes, and technologies. Convergent-provided products and services are only one part of this multi-layered approach, will not detect or prevent all threats or solve every risk, and should not be your sole method of security or safety. Please see the "IMPORTANT PRODUCT SAFETY AND SERVICE INFORMATION" documentation, available at convergent.com/terms, prior to using a Convergent-installed system.
